

CERTIFICATION OF BONDING  
WIND ENERGY RIGHT-OF-WAY AUTHORIZATIONS

Memorandum

To: Director

From: **[STATE DIRECTOR]**

Subject: Certification of Wind Energy Authorization Bond Review

I am certifying that **[STATE]** has reviewed information in the Legacy Rehost System 2000 (LR2000) Bond and Surety System, related to bonds for all wind energy right-of-way authorizations, including existing authorizations, for compliance with 43 CFR 2805.12 (g) and the BLM policies regarding bonding of wind energy site testing and development authorizations. Bonds are required prior to the issuance of a Notice to Proceed or the start of land disturbance activities granted in the right-of-way authorization.

- Wind energy site-specific and project area authorizations have required bonds and data is entered into the LR2000 Bond and Surety System.
- Wind energy development authorizations have required bonds and data is entered into the LR2000 Bond and Surety System.
- Where wind energy authorizations have been issued including a Notice to Proceed or the operator has started land disturbance activities but the authorization is missing bonds, a letter of non-compliance has been issued to the right-of-way holder including the timeframe in which to provide a bond to BLM.

Attached is a copy of the LR2000 Bond and Surety System report for **[STATE]** showing wind energy right-of-way authorizations and relevant bond information. If you have any questions, please contact **[insert name and contact info for STATE]**.
