Subject
Please reconsider pesiticide use
for invasive weeds

Brian,

1 I am writing to simply state my opposition to the recent call for using herbicides to kill invasive plant species on BLM land. I hope that best practices for land use will continue to be considered before more chemicals are used on the land. In the Pacific Northwest where I live creative ideas for invasive plant species reduction have been implemented such as bringing in goat herds, sustianable forest practices, and reduction of erosion from over grazing and Off road vehicles. I encourage you and your staff to consider leaving a leagacy of innovative ideas and not tainted ground water and cancerous growths.

To your legacy,

Elaine Jane
