Subject
Plan C for BLM management plan

Dear Decision Makers,

1 I am writing to urge you to choose plan C for the BLM management plan. There are other alternative for fire supression than more pesticides! We are living with the legacy of heavy pesticide use and can see the results in the health of our rivers and agriculture areas. Pesticides from agriculture have harmed many people and animals, including increased cancer rates among applicators and residents in the areas.

2 Our open spaces are important to wildlife and people. I believe increasing pesticide use is a grave mistake. I am a public elementary school teacher and my students and I are studying ways that humans can pollute less and make the world a healthier place for all. I was shocked to hear that BLM is considering more intentionally adding more poisons to our already toxic world.

Please make a chose that will be good for all living things.

Thank you.

Laura Allen
