More Public Comments

(Embedded image moved to file: pic25679.gif)

- 1 1. Why are the previous years', (1986 all the way through to 1992!)!!!! studies/times/monies having to be replaced? Where is the oversight committee and who is it? Where is the accountability for those FOUR existing, (implemented?) EIS's.
- 2 2. The TWO PRIMARY OBJECTIVES  
Why do you "need to determine which herbicide active ingredients.....  
Hasn't that already been done by the chemical company's MSDS sheets that must accompany any and all chemicals?
- 3 3. To DEVELOP A MULTI-AGENCY (Please!!!!!! This is MORE government! NOT LESS!!) The answer to the above will also answer this. THESE STUDIES HAVE ALREADY BEEN DONE!!! We don't need more government to do what has been/is already being done!
- 4 4. You are currently using 14 herbicides and want to use 4 new ones! Why do you need so many?? That is ridiculous!! 18 different chemicals, (POISON cocktails) to control the forest fires and keep the forests healthy?????? Show me the tests that were done on the many different combinations of these 18 chemicals. What were the results of even mixing two of them together? What is 'out there' that can't be fought

with the current already APPROVED chemicals? Alien growth?  
PLEASE!!!!???? Get real!

5. Public meetings. Why was there a public meeting held in WA DC? The PUBLIC in that city isn't even involved!! In fact, that whole side of the country isn't even involved!
6. "provide a cumulative impact analysis of the use of chemical herbicides in conjunction with other treatment methods." Shouldn't this be the FIRST thing done before ANYTHING else is even thought of?
7. 6 million acres? 5.1 million acres? 932,000 acres? How many acres are you ultimately going to be dumping on? And what happens if your spray gets on my private property?
8. How many TONS of herbicides would this equate to and what would be its cost and the cost of the application? Who would be responsible for any ill effects of these applications?
9. The food chain starts at the herbal level, (vegetation). What studies have been done to show that the critters', (especially endangered/protected) DNA are NOT being altered in the LEAST! ??
10. Had I been aware of this 'public involvement' I would have been able to come up with a whole lot more comments.
