Subject
Proposed Treatments of Vegetation
on BLM Public Lands in Western U.S.

Dear Brian Amme:

1 I am very concerned and passionately opposed to massive amounts of chemical herbicides being dumped onto the lands of 17 states in the Western US, especially since I (and my family) live in one of those states -- Texas. How many times do we humans need to witness the ill effects of wide spread chemical pesticide and herbicide usage before we accept a more natural and health approach to land management? Does no one remember the horrors of Agent Orange and DDT? Herbicides and pesticides kill the good along with the unwanted.

2 Please, seek and use the safest and most natural methods possible to manage our lands and help control forest fires. Bombing the ecosystem with toxic chemicals is not the way. Once again, please, no herbicides.

Sincerely,

Omega M. Baker
10304 Button Quail Cove
Austin, TX 78758
