Subject
birth defects from pesticides are
horrific

vegeis@nv.blm.gov

Please help end the use of pesticides that cause such horrific birth defects, especially for baby boys. The effects on women and girls are sad increases in cancers, especially of the reproductive system.

1

It would be better to use animals that graze on weeds and other mechanical ways of using weeds to make fertilizers and soil conditioners.

2

I was so distressed to hear of plans for widespread use of these man-made endocrine disrupters. The manufacture and transportation of these substances exposes workers and innocents on the highways to terrible risk.

3

4 It is so sad if we have to have a Bhopal-sized catastrophe in the continental U.S. to make the true risk of these substances apparent to enough people to stop their use.

Sincerely,

mary pearce
