To Brian Amme  
Project Director BLM,

1 Hello. I am writing in regards to the proposed increase of Herbicide spraying in Western States. I am sure you know that many people are concerned about the negative health affects from exposure to herbicides as well as the long term effects these chemicals pose to our environment. I am against the use of sprays for these reasons, as I feel the negative consequences out way any benefit. I also feel there are more affective ways of managing land then spraying for unwanted weeds. I encourage you to look for more natural solutions to take the place of the use of toxic chemicals.

Thank you,

Tiffany Malakian
