Subject

Alternative B

Dear BLM,

1 I have been wondering for several years why BLM has not been active in pursuing new herbicide technology to manage noxious weeds on federal lands when they can be so much more effective on noxious weed control in many cases. If we must do one thing to be effective in our daily lives, jobs or other endeavors we must embrace scientifically proven technology or we will not progress and be as successful as we could otherwise be.

2 I support the developed "Protocol for Identifying, Evaluating and Using New Herbicides". I also support the "Preferred Alternative B", I adamantly oppose all of the other herbicide alternative options, but I do not support clearing or removing live "stands of pinyon and juniper trees" with out other specific information.

Respectfully Submitted

Paul Burgell
