Subject
No Dangerous Herbicides on Public
Lands in New Mexico, Please

Dear BLM Land Managers:

1 Please do not allow the use of toxic herbicides by aerial spraying or otherwise on our public lands in New Mexico. They have unacceptable negative impacts on non-targeted vegetation, wildlife, and people, including recreationists, tourists, and native peoples. The pesticides that would be used include persistent and mobile chemicals, including known developmental and reproductive toxins. Just don't allow it, please.

I am a New Mexico resident.

Thank you.

Best,

Doug Fine
