Subject
Draft Vegetation Treatments Using
Herbicides on Bureau of Land
Management Lands in 17 Western
States Programmatic EIS (PEIS)

Dear Sirs

As you know there are many ways to control "unwanted vegetation". Yet given the location of many of the BLM Lands, combined with what we know about the deleterious effects of herbicides and pesticides, there are alternatives.

One alternative is to draw on the resources of herbalists who can, with their vast knowledge of medicinal and culinary herbs, organize a network to help 'weed out' truly noxious plants while, at the same time, preserving those with beneficial properties.

I can happily provide more information. In the meantime, I welcome your comments.

Sincerely

Leslie
