Bureau of Land Management

Attn: Rough Draw, WYW-168317

1425 Fort Street

Buffalo, WY 82834

Please find below my comments in support of the Patriot Energy Resources proposal for the Rough Draw Project.

- The infrastructure is already in place.
- This process will enhance the wells to produce more gas by production of bacteria in the coal seam.
- It appears that it would be negligent not to take advantage due to the clean energy it would provide.
- Regulatory agencies have proved this process – BLM permit, land use 43CFR2920-1 Rough Draw Unit.
- By putting water back into the Anderson formation coal seam, the agriculture producers are able to utilize the water.
- The economy would be stimulated by the increase in gas production and this would impact the Powder River Basin.
- We currently own property located in T56N R74W and T55N R73W with CBM development.
- As a landowner, the annual payments help sustain our agriculture way of life.

Sincerely,

Robert Brug
