**1. Finding of No Significant Impact**

Based on my review of the Environmental Assessment (EA) for the Yellow Spur Federal #1 well pad and access road, I have determined that the Proposed Action is in conformance with the approved land use plans. Based upon the review of the EA it was determined that authorization of the well and associated infrastructure would not result in a significant impact. Therefore, an environmental impact statement is not required. Further explanation of the finding is as follows:

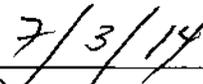

Impacts to other resources include geology; minerals; paleontology; air quality; soils; water; vegetation, wetlands invasive/noxious weeds; range resources and other land use; wildlife; fisheries; recreation and visual resources; cultural resources; socioeconomics; transportation; health and safety; and noise would be minor, short term, necessary and due impacts, or that long-term impacts are mitigated to sufficient levels to avoid significant impacts. Potentially substantial positive economic impacts may result for the company as well as the local and state governments from the authorization of this proposal.

The Kemmerer Resource Area, Resource Management Plan provides for the use of these public lands for oil and natural gas development. The Proposed Action would be in conformance with this land use plan, and an amendment to the RMP would not be necessary to implement the Proposed Action.
