Dear Mr. Hiner,

I am writing to express my opinion on the revised draft of the Pinedale Anticline SEIS.

As I have commented previously, I am dismayed by the pace of the development of the recourses in the Anticline area. The effect on the wildlife, community of Pinedale, air quality in the area, water recourses and overall ecology have to this point been huge. I would greatly support a slow down in the pace of development and absolute adherence to the seasonal stipulations necessary to allow wildlife to use the area in the time proved manner that has been the legacy of this land. If Alternative E can do this, I would support it. I would request honest and thorough monitoring of this area by qualified and unbiased professionals throughout the development process.

As an employee of the US Government and the people it serves, your integrity in this issue is imperative.

Thank you for your consideration.

Sincerely,
Patricia Poletti
