**DECISION**  
**APRIL 2009 OIL AND GAS SALE PROTEST OF 102 PARCELS**  
**PROTESTS DISMISSED IN PART**  
**2 PARCELS DEFERRED PRIOR TO SALE**  
**10 LEASE OFFERS DEFERRED**

We received 6 protests to the offering of all 102 parcels on the April 7, 2009 competitive oil and gas lease sale located in the Bureau of Land Management (BLM) Wyoming State Office (WSO), Buffalo (BFO), Casper (CFO), Cody (CYFO), Kemmerer (KFO), Newcastle (NFO), Rawlins (RFO), Rock Springs (RSFO) and Worland (WFO) Field Offices. Western Resource Advocates for National Audubon Society and Audubon Wyoming (referred to as Audubon); Theodore Roosevelt Conservation Partnership (TRCP); Powder River Basin Resource Council (PRBRC);

Biodiversity Conservation Alliance and Center for Native Ecosystems (BCA), Wyoming Outdoor Council, The Wilderness Society, and Greater Yellowstone Coalition (WOC), Wyoming Wildlife Federation and National Wildlife Federation (WWF); and The Wilderness Society (TWS) filed protests to this competitive oil and gas lease sale. The State Director elected to include all but 2 of the protested parcels in the competitive sale while the merits of the protests are considered.

**DECISION:**

The following 10 parcels will be deferred based on the information contained in the text within the Discussion section as well as the information disclosed in the Environmental Assessments (EAs) prepared by each BLM WY Field Office entitled “Previously Sold Lease Parcels EA” and screens for wilderness characteristics and Greater sage-grouse: WY-0904-026, 031, 044, 074, 079, 080, 081, and 082. Parcel 003 is being deferred to add inadvertently missed stipulations for Class I and II waters. Parcel 012 is deferred pending completion of the sage-grouse RMP amendment. Parcels 026, 031, 044, and 074 are deferred pending completion of RMP revisions. Parcels 079, 080, 081, and 082 did not pass the sage-grouse screening criteria and are deferred. Parcels WY-0904-067 and 073 were removed from the competitive oil and gas sale before the sale. The remaining 92 parcels will be issued.

**Discussion:**

**1. TRCP and BCA argue that oil and gas development has led to and will continue to lead to fragmented wildlife habitats. BCA argues all of the associated oil and gas activities will disrupt habitats, destroy nesting and brooding grounds, and disturb wildlife. Protesters argue these lands serve as quiet, serene places of natural beauty and provide excellent recreational opportunities. Oil and gas exploration has jeopardized recreational, cultural and biodiversity values making the public lands impossible for the public to use and enjoy.**

**TRCP argues that the BLM has not conducted site-specific analysis of leasing; that the leasing analysis done at the planning stage was only to decide whether lands should be open or closed to leasing. Protesters argue that the BLM incorrectly defers site-specific analysis to the project level or development stage. TRCP argues that the BLM must conduct site-specific National Environmental Policy Act (NEPA) analysis before leasing or only use the No Surface Occupancy (NSO) stipulation.**

BLM Response: The BLM has the responsibility to manage the public lands in accordance with the Federal Lands Policy and Management Act (FLPMA). FLPMA requires the BLM to manage the public lands and resources under the concept of multiple use and sustained yield.

Specifically, the concept of multiple use and sustained yield includes: (1) the lands and their various resource values are managed so they are utilized in the combination that best meets the present and future needs of the American people; (2) a combination of balanced and diverse resource uses taking into account the long-term needs of future generations for renewable and non-renewable resources including, but not limited to recreation, range, timber, minerals, watershed, wildlife and fish, and natural scenic, scientific and historical values; (3) the use of

some land for less than all of the resources; (4) harmonious and coordinated management of the various resources without permanent impairment of the productivity of the land and the quality of the environment with consideration given to the relative values of the resource and not necessarily to the combination of uses that gives the greatest economic return or the greatest unit output; and (5) to make the most judicious use of the land for some or all of the resources or related services over areas large enough to provide sufficient latitude for periodic adjustments in use to conform to changing needs and conditions. The BLM Wyoming manages its oil and gas leasing program in accordance with FLPMA.

FLPMA requires the BLM to develop and maintain Resource Management Plans (RMP). During preparation of the RMP, and prior to issuing any oil and gas leases, the BLM performs an environmental analysis under NEPA which discloses anticipated impacts that can result from leasing and subsequent oil and gas development on the environment, including the public lands and its resources. As a result, the BLM develops appropriate mitigation and protection measures, such as lease stipulations, before the BLM issues any oil and gas lease. FLPMA does not require the BLM to analyze every aspect of a transaction to make sure any actions by the BLM will protect the long-term viability of the public lands. Nevertheless, the BLM has prepared an environmental assessment of the impacts of the lease sale and we disagree with the protesters' argument that the BLM has not performed sufficient NEPA analysis to disclose the potential impacts of oil and gas development before issuing an oil and gas lease.

According to the Tenth Circuit Court of Appeals, site-specific NEPA analysis at the leasing stage may not be possible absent concrete development proposals. Whether such site-specific analysis is required depends upon a fact-specific inquiry. Often, where environmental impacts remain unidentifiable until exploration can narrow the range of likely drilling sites, the Application for Permit to Drill (APD) may be the first useful point at which a site-specific environmental appraisal can be undertaken (*Park County Resource Council, Inc. v. U.S. Department of Agriculture*, 10th Cir., April 17, 1987). In addition, the Interior Board of Land Appeals (IBLA) has decided that, "the BLM is not required to undertake a site-specific environmental review prior to issuing an oil and gas lease when it previously analyzed the environmental consequences of leasing the land . . . ." (*Colorado Environmental Coalition, et. al*, IBLA 96-243, decided June 10, 1999). However, when site-specific impacts are reasonably foreseeable at the leasing stage, NEPA requires the analysis and disclosure of such reasonably foreseeable site-specific impacts. (*N.M ex rel. Richardson v. BLM*, 565 F.3d 683, 718-19 (10<sup>th</sup> Cir. 2009)). Although certain site-specific impacts remain unforeseeable at this time, the analysis in the Previously Sold Lease Parcels EA provides additional disclosure and analysis of the environmental impacts associated with our decision to issue leases for these parcels.

**2. BCA argues that the BLM has given rights to develop minerals on split estate lands without taking steps to fully protect the rights and interests of the surface owner. BCA further argues Wyoming's rural heritage and lifestyle are threatened by the sale of the subject lease parcels. WOC argues BLM should attach a lease stipulation that requires the operator to comply with Washington Office (WO) Instruction Memorandum (IM) No. 2003-131, Permitting Oil and Gas on Split Estate Lands and Guidance for Onshore Oil and**

**Gas Order No. 1. Representative Jeb Steward, Ladder Livestock Company, and John Etchepare, Director of the Wyoming Department of Agriculture argue that the BLM has not prepared the communities and affected parties with proper notification prior to lease sales, future proposed actions and decisions for acquisition of lease agreements.**

BLM Response: We disagree with appellant's arguments that the BLM does not take steps to protect the rights and interests of the surface owner on split-estate lands.

In the case of the subject split estate lands, the United States issued a patent, severing the surface estate from the mineral estate. This patent contains terms and conditions whereby the United States reserved the right to dispose of the minerals in accordance with the mineral land laws in force at the time of such disposal. Any person who has acquired from the United States the right to develop the mineral deposit, has the right to remove the minerals and occupy so much of the surface as may be required for all purposes reasonably incident to the development of the minerals.

The lands protested are available for oil and gas leasing in accordance with the existing applicable RMP. Decisions made in the applicable RMP Record of Decision (ROD) apply only to Federal lands, including lands where non-Federal surface overlies Federal mineral estate. However, the analysis conducted in the RMP Environmental Impact Statement (EIS) evaluated the effects that would occur in the entire area and its affected environment, regardless of land or mineral ownership (40 CFR 1502.15). The effects on non-Federal lands are included to provide a full disclosure of effects for the entire area. When the BLM analyzes the impacts to surface resources caused by drilling and production operations, the analysis includes impacts to both Federal and non-Federal surfaces.

Section 226(g) of the Mineral Leasing Act (MLA) provides that a lessee cannot engage in any surface-disturbing activities before review and approval of an APD. This includes environmental and technical reviews. Therefore, a surface owner's interests and use of the surface will not be affected until the conclusion of these reviews. Surface owners are invited to participate in the onsite pre-drill inspections where most of the information to conduct the environmental analysis is gathered. In this manner, the surface owner can participate in development of the surface-use plan, reclamation requirements, and conditions of approval (COAs).

Prior to performing any surface-disturbing activities, the mineral lessee is required to contact the surface owner and (1) secure written consent or a waiver from the surface owner in the form of a surface owner agreement, or (2) provide payment to the surface owner for damages to crops and tangible improvements; or (3) provide a bond for the benefit of the surface owner to obtain payment for damages to crops and tangible improvements (Section 9 of the Stock Raising Homestead Act of December 29, 1916 (SRHA)). An APD cannot be considered complete or approved without proof that one of the three requirements listed above has been satisfied.

A notice of an APD must be posted in the local BLM office for at least 30 days prior to approval. This is another opportunity for the surface owner and/or the public to raise any concerns with the BLM regarding any split-estate or surface use issues.

WO IM No. 2003-131, Permitting Oil and Gas on Split Estate Lands and Guidance for Onshore Oil and Gas Order No. 1, was issued by the BLM Washington Office on April 2, 2003. This IM states that, in the case of split-estate lands, one bond (3104 Bond) is required for the oil and gas operations performed under 43 CFR 3160, and a second bond (3814 Bond) is required to satisfy Section 9 of the SRHA, if no agreement between the surface owner and lessee or operator can be reached (43 CFR 3814).

WO IM No. 2003-131 states the BLM will not consider an APD administratively or technically complete until the Federal lessee or the operator complies with Onshore Oil and Gas Order No. 1. Compliance with Onshore Oil and Gas Order No. 1 requires the Federal mineral lessee or its operator to enter into good-faith negotiations with the private surface owner to reach an agreement for the protection of surface resources and reclamation of the disturbed areas, or payment in lieu thereof, to compensate the surface owner for loss of crops and damages to tangible improvements, if any. The BLM will not approve an APD until the operator has complied with all of the requirements in Onshore Oil and Gas Order No. 1, as well as the requirements in WO IM No. 2003-131. It is not necessary to attach a lease stipulation that requires the lessee to comply with applicable laws, regulations, and the BLM policy.

As indicated above, the mineral lessee has a statutory right to develop the mineral estate. The BLM recognizes the surface owner also has interest in how development will occur. The BLM will not approve surface-disturbing activities prior to ensuring the surface owner has been invited to participate in the onsite inspection as described above.

Every member of the public is invited to participate in the development of the BLM Land Use Plans (LUP) and the associated EIS. During preparation of every LUP, the BLM has requested and responded to public comments specifically related to oil and gas leasing (Draft RMP/EIS, Dear Reader Letter). The decision to lease and allocate lands is made at the LUP stage.

The decision in all the applicable RMPs/EISs is that the subject protested lands are available for leasing. We find the field manager is not required by NEPA to involve the public during preparation of every lease sale EA (or Documentation of Land Use Plan Conformance and NEPA Adequacy (DNA)), particularly when the proposed activity is in conformance with the current land use plan (H-1710-1, NEPA Handbook, Chapter IV.4.A, and Preparing Environmental Assessments).

The notice of sale can also be found at <http://www.wy.blm.gov/minerals/minerals.html>. The notice of sale has been on this website for every oil and gas lease sale we have conducted since August 1998. For the past 15 years, approximately three weeks prior to the date of the sale, a press release is prepared and sent to the general media.

The notice of sale appears in the Cheyenne and Casper, Wyoming newspapers, and sometimes in the Billings, Montana, newspaper.

The sale is announced on several Wyoming radio and TV stations. The notice of the sale is mailed out to all those who subscribe to receiving the notice. This subscription includes WOC and BCA. In addition, the BLM provides a copy of the notice of sale to anyone who requests a copy.

**3. BCA argues that the BLM cannot offer parcels in citizens' proposed wilderness areas because to do so would violate Washington Office Instruction Memorandum (WO IM) No. 2004-110 Change 1, Fluid Mineral Leasing and Related Planning and National Environmental Policy Act (NEPA) Processes and Best Management Practices. Specifically, BCA argues these parcels are located in citizens' proposed wilderness areas (CPW), but there is no indication that the BLM has evaluated the application of Best Management Practices (BMPs) to these parcels as required by the subject WO IM. BCA and WOC argue these areas have special values. Even if the BLM does not recommend them for wilderness designation, the parcels should not be leased. BCA and WOC protested the following some or all of the parcels: WY-0904-067 (CyFO-McCullough/Fannie/Red Butte); 045, 046, 047, 048, 049, 051, 052, 057, 058, 059, 060, 061, 062, 063, 064, 065, 066, 070, 071, and 072 (RFO-RSFO-Adobe Town/Kinney Rim North and South CWPs).**

BLM Response: All of the lands that the citizens' groups have proposed as wilderness areas are available and eligible for oil and gas leasing in accordance with the existing applicable RMPs.

- a) WO IM No. 2004-110, Change 1, does not forbid leasing in CPW areas.
- b) The BLM did evaluate application of BMPs to those parcels in conformity with WO IM No. 2004-110, Change 1.

The WO IM No. 2004-110, Change 1, states in part: "Using BMPs either as stipulations or conditions of approval can significantly mitigate impacts from oil, gas, or geothermal development when they are appropriately applied to new or existing leases consistent with lease rights granted." The subject IM also states in part: ". . . the appropriate offices shall evaluate the application of BMPs (see also WO IM No. 2004-194). Often, BMPs applied either as stipulations or conditions of approval, are more effective in mitigating impacts to wildlife resources than stipulations such as timing limitations or seasonal closures." WO IM No. 2004-194, Integration of Best Management Practices into Application for Permit to Drill Approvals and Associated Rights-of Way, establishes policy that the BLM Field Offices consider BMPs in NEPA documents to mitigate anticipated impacts to surface and subsurface resources. BMPs are innovative, dynamic, and economically feasible mitigation measures applied on a site-specific basis to reduce, prevent, or avoid adverse environmental or social impacts. BMPs not incorporated in the lease agreement (stipulations), may be considered and evaluated through the NEPA process and incorporated into an APD as a COA.

The BLM's decision is consistent with WO IM No. 2004-110, Change 1. As indicated in the subject IMs, BMPs applied as lease stipulations or COAs, on a case-by-case basis, can be more

effective in mitigating adverse environmental or social impacts than certain standard lease stipulations. These IMs require the BLM to consider using BMPs whenever possible and appropriate. BMPs are dynamic, innovative, and can be cost effective. The BLM is requiring, and the oil and gas industry is using BMPs. However, none of the subject IMs state that the BLM should not issue an oil and gas lease if the BLM did not consider or use BMPs as lease stipulations or that the BLM should evaluate the effectiveness of the BMPs before the BLM offers for sale leases with BMPs as stipulations.

The IBLA, in, Wyoming Outdoor Council, et al.,<sup>171</sup> IBLA 153, 168, (March 29, 2007) held that WO IM No. 2004-110, Change 1 places no limitation on the authorized officer's discretion as to whether BMPs will be applied in any given case. IBLA goes on to state, the subject IM not only expressly preserves the BLM's discretionary authority in matters involving application of BMPs to a given lease but further makes clear that the appropriate time for the requisite evaluation of BMPs is at the APD, or site-specific stage of development.

Only Congress can designate wilderness areas. However, FLPMA provides the BLM with the authority to consider, once lands with wilderness characteristics (as defined in Section 2 (c) of the Wilderness Act of 1964) are identified, to manage lands to protect those wilderness characteristics. 43 U.S.C. §1711 and §1712.

The BLM's policy for handling citizen-proposed wilderness is explained in WO IM No. 2003-275 entitled "Consideration of Wilderness Characteristics in Land Use Plans (Excluding Alaska)." This guidance sets the policy to comply with the settlement in *Utah v. Norton* and the decision to apply the terms of the settlement Bureau-wide, excluding Alaska. The settlement acknowledges that the BLM's authority to conduct wilderness reviews, including the establishment of new Wilderness Study Area (WSAs) expired no later than October 21, 1993, with the submission of the wilderness suitability recommendations to Congress pursuant to Section 603 of FLPMA and that the BLM is without authority to establish new WSAs. However, the BLM's authority under Section 201 of FLPMA to inventory public land resources and other values, including characteristics associated with the concept of wilderness, and to consider such information during land use planning was not diminished. The BLM can make a variety of land use plan decisions to protect wilderness characteristics, such as Visual Resource Management (VRM) classes, Area of Critical Environmental Concerns (ACECs), and establishing conditions of use to be attached to permits, leases or other authorizations. Public wilderness proposals represent a land use proposal. The BLM is authorized to consider such information during the preparation of a land use plan amendment or revision. The BLM must determine, as with any new information, if the public wilderness proposals contain significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or impacts that have not been previously analyzed. New information, or changed circumstances alone, or the failure to consider a factor or matter of little consequence is not sufficient to require additional NEPA consideration prior to implementing a previously approved decision. The BLM Field Offices maintain current files to document our findings (both positive and negative for lands with wilderness characteristics).

Each Field Office undergoing an RMP revision will or has undertaken review of the 1991 inventoried areas and CPWs related to these areas. If the inventoried areas and the CPWs do not have wilderness characteristics, and if the areas remain open to leasing, any parcels nominated in the areas will go up for sale at an oil and gas competitive lease sale.

The Adobe Town CPW is located in the RFO area. The lands encompassed by the Adobe Town CPW were analyzed for wilderness characteristics by the BLM in the late 1970's. The BLM determined in 1980 that this area does not have wilderness characteristics.

The RFO also reviewed the Adobe Town area information provided by BCA in 2001. The RFO compared the information provided by BCA to existing databases and conducted field reviews. By letter dated February 5, 2002, to BCA, the RFO indicated that the lands located in the railroad grant checkerboard area were dropped from wilderness consideration because the lands did not meet the minimum size criteria and would be impossible to manage as wilderness. The letter also stated that ongoing oil and gas development presently occurring within other parts of the Adobe Town CPW area is consistent with the Great Divide RMP (November 1990), as well as other approved NEPA documents for oil and gas development in the area. The majority of these lands have existing Federal oil and gas leases. BCA's proposal to place a moratorium on future oil and gas leasing in this area is not consistent with the Great Divide RMP and current BLM policy. However, the RFO indicated that part of the lands included in the Adobe Town CPW may have wilderness characteristics. The RFO indicated they will further analyze this situation during their ongoing RMP revision.

In January 2008, the RFO released their Rawlins Proposed RMP/FEIS. The RFO has evaluated the subject lands to determine whether they are manageable for wilderness characteristics. The RFO found that "...the vast majority of the areas under consideration have been leased for oil and gas development, in which case we do not have the means to prevent impairment of any wilderness character that may be present...Because we found the lands to be unmanageable for wilderness characteristics...we elected to drop them from further consideration...and will not be part of an alternative in this RMP."

Parcels located in the RFO RMP DRUA are 046, 047, 048, and 057. The Adobe Town Dispersed Recreation Use Area (DRUA) (238,970 acres) (Map 2-17). The DRUA consists of the RFO portion of the Adobe Town WSA and adjacent lands containing opportunities for dispersed recreation use. A portion of the DRUA has been leased for oil and gas development (approximately 176,000 acres). After cessation of oil and gas development, these areas will be a priority for reclamation after oil and gas development ceases (Appendix 37) and should be reclaimed to the setting opportunity described in Table A37-1 of Appendix 37 in the RMP FEIS.

As indicated above, the RFO has reviewed the lands proposed by BCA for wilderness (the lands BCA has asked the BLM not to lease) numerous times and have decided the lands do not meet the criteria to be managed as wilderness. Discussion of wilderness characteristics is found in Section 3.3 of the Previously Sold Lease Parcels EA prepared by the FOs.

**Kinney Rim CPW:** The Kinney Rim North WSA is located in the RSFO area. The Kinney Rim North area was originally reviewed in 1980 for wilderness characteristics and BLM determined these lands were not suitable for further wilderness study. In February 2002, BCA submitted to the BLM a “Citizens’ Wilderness Inventory” for several areas in southern Wyoming including the Kinney Rim North. The RSFO reviewed the inventory information provided by the BCA by comparing it to existing databases and conducting field reviews. The evaluation noted those areas within the Kinney Rim North CPW were either located in the railroad grant checkerboard area or there was already significant development. The checkerboard lands were dropped from wilderness consideration because the lands did not meet the minimum size criteria and would be impossible to manage as wilderness. The rest of the CPW land was noted to be influenced by man’s past and current activities in the form of livestock improvements and oil and gas development, and therefore, precludes wilderness consideration. The RSFO notified BCA by letter dated January 2, 2003, that the public lands in Kinney Rim North CPW area do not have wilderness characteristics.

The Kinney Rim South area, located in the RFO, was originally reviewed for wilderness characteristics by the BLM in 1980. At that time, BLM determined these lands were not suitable for further wilderness consideration. In February 2002, the BCA submitted to the BLM a “Citizens’ Wilderness Inventory” for several areas in Southern Wyoming, including the Kinney Rim South area. The RFO reviewed the information provided by BCA by comparing BCA’s information to existing databases and conducted field reviews. The RFO completed an inventory area evaluation for Kinney Rim South. The RFO concluded that the imprints of man are noticeable throughout much of the area in the form of livestock improvements and oil and gas development. In a letter dated March 19, 2003, to BCA, the RFO evaluation determined the public lands within the Kinney Rim South area do not have wilderness characteristics.

In summary, the Kinney Rim South area has been analyzed many times in the past for wilderness characteristics. The RFO recently reviewed the BCA’s proposed wilderness designation during their RMP revision. The BLM determined the subject lands do not warrant a wilderness designation because of the lack of wilderness characteristics.

April 2009 oil and gas competitive sale parcels 057, 058, 060, 062, 070, 071, and 072 are located in the Rawlins or Rock Springs FOs and in the Adobe Town and/or Kinney Rim North and South CPWs.

Parcels located in the checkerboard are 045, 049, 051, 059, 061, 063, 064, 065, 066, 070, 071, and 072. Checkerboard lands are not recommended for wilderness because of the alternating private property with federal lands. BLM does not have authority over the private lands making management of the alternating federal lands an insufficient size to make practicable its preservation or use as wilderness. Several of the parcels listed above are not within the citizens proposed wilderness lands (049, 051, 052, 059, 061, 063, 064, 065, and 066).

Two parcels (026 and 044), not protested, will be deferred because they were found to have wilderness characteristics. These parcels were processed through the Wilderness Characteristics Screen, which is based on two criteria. The first criteria is whether the lands within the parcel

have been evaluated for wilderness characteristics, and if wilderness characteristics have been identified, whether special management has been applied. The second criteria if the lands have not been evaluated, is whether there are existing surface disturbances and/or existing leases. The second criteria also considers what the surface ownership is and the status of the RMP. Parcel 026 is located in the BFO and will be deferred for further evaluation during their RMP revision. Parcel 044 is located in the WFO and will also be deferred for further evaluation during their RMP revision.

Because the BLM has already offered the April 2009 lease parcels WY-0904-026 and 044, we will defer issuing the leases for these two parcels under the following conditions. The BLM will ask the high bidders for these parcels whether they are willing to wait until the Buffalo RMP Draft EIS (DEIS) and the Worland RMP Draft EIS (DEIS) is made available to the public for review and comment:

- If the high bidder is not willing to wait, the BLM will not issue the lease and will refund their money.
- If the high bidder is willing to wait, but the BLM subsequently determines that leasing the particular parcel is no longer appropriate, the BLM will reject the lease offer and refund their money.
- If the high bidder is willing to wait, and the BLM decides that leasing is still appropriate, but determines that additional stipulations are necessary, the BLM will ask the high bidder if it is willing to accept the lease with the new stipulations. If the high bidder is willing to accept the lease with the new stipulations, the BLM will issue the lease. If the high bidder is not willing to accept the lease with the new stipulations, the BLM will reject the lease offer and refund their money.
- If the high bidder requests a refund of their money at any time during this process, the BLM will reject the lease offer and refund the money.

Once the BFO DEIS and the WFO DEIS have been made available to the public for review and comment, the BLM may decide that it is still appropriate to offer leases in the subject areas without any new stipulations.

The DNA and EA provided the field managers the opportunity to review whether the environmental impacts associated with oil and gas leasing and development operations have been adequately analyzed in the appropriate RMP/EIS and other applicable NEPA documents. The field managers attached stipulations that are in accordance with the existing RMP. The BLM concluded offering the parcels for leasing, with appropriate stipulations and mitigation measures, conforms to the applicable land use plan and that the existing NEPA documentation, along with the Previously Sold Lease Parcels EA fully covers the proposed action and constitutes the BLM's compliance with the requirements of NEPA.

**4. BCA, TRCP, and WWF protested some or all of the following 70 parcels because the parcels are located in big game crucial winter range, big game migration routes, and parturition areas: WY-0904-004, 005, 006, 012, 017, 018, 019, 022, 026, 027, 028, 031, 036,**

037, 039, 040, 041, 042, 044, 045, 046, 047, 048, 049, 050, 051, 052, 057, 058, 059, 060, 061, 062, 063, 064, 065, 066, 070, 071, 072, 073, 074, 075, 076, 077, 078, 079, 080, 081, 082, 083, 084, 085, 086, 087, 088, 089, 090, 091, 092, 093, 094, 095, 096, 098, 099, and 101. TRCP and WWF protested parcels for big game crucial winter range, migration routes or vital habitat for Greater sage-grouse. These protested parcels were not segregated by concern/issue and have been included in total in this section. These parcels are located in BFO, CYFO, KFO, NFO, RFO, RSFO, and WFO. BCA argues that offering the subject parcels is a violation of FLPMA because the BLM is required to consider and resolve inconsistencies between the BLM actions and State plans, as well as to prevent unnecessary or undue degradation of the public lands. BCA argues that although the subject crucial winter range parcels contain a stipulation prohibiting drilling between November 15 and April 30, and a stipulation prohibiting drilling between May 1 and June 30 for parturition, this is not a total prohibition on drilling during all of the stressful winter period and the BLM almost invariably grants lease stipulation exceptions. BCA and TRCP argue that the BLM has violated NEPA because the BLM has not stipulated the parcels to protect crucial migration routes and has not considered the new environmental information (crucial migration routes and mule deer use of winter range during development) in a pre-leasing NEPA document where impacts will occur from offering oil and gas parcels for sale. BCA argues that the BLM has also violated NEPA by failing to consider NSO and No-Leasing alternatives for lands with special characteristics, such as crucial winter ranges and migration routes, and to determine whether leasing is appropriate for these parcels. Several of the groups argue there is new and significant information on the impacts of oil and gas development available that the BLM has not considered and analyzed under NEPA and in the RMPs. TRCP argues new information gained from studies and from Wyoming Game and Fish Department (WGFD) data has not been analyzed in existing documents and should be analyzed before BLM issues new leases. TRCP considers this new information ‘significant’ thus triggering a new NEPA analysis.

BLM Response: The protest is incorrect in its characterization of FLPMA’s requirements. Section 202 of FLPMA (Title 43, USC § 1712), states when developing and revising land use plans, the Secretary of the Interior shall “to the extent consistent with the laws governing the administration of the public lands, coordinate the land use inventory, planning and management activities . . . with the land use planning and management programs of other Federal departments and agencies and of the States and local Governments within which the lands are located.” The Secretary is also required to assist in resolving, to the extent practical, any inconsistencies between Federal and non-Federal plans.

The Wyoming BLM entered into a Memorandum of Understanding (MOU) (WY-131) with the WGFD (currently in revision). In accordance with the terms of the subject MOU, specifically Appendix 5G, the WSO will transmit a copy of every preliminary notice of competitive oil and gas lease sale list to the WGFD. The preliminary notice is sent to the WGFD approximately five months prior to the sale. All eight WGFD Field Offices have approximately two to three weeks to review the list. The WGFD Field Offices will coordinate with their respective BLM Field Office to review wildlife data and to help ensure appropriate lease stipulations are included as

specified in the applicable RMP. When the WGFD review is complete, the preliminary list is returned to the WSO. Any necessary changes will be incorporated into the final notice of competitive oil and gas lease sale list. Wyoming BLM uses WGFD data to stipulate the oil and gas lease parcels. In accordance with the subject MOU, if the WGFD has concerns about any parcel located in a big game crucial winter range, or along a big game migration route, or in a parturition area, the WGFD will forward their concerns to the BLM. The BLM did coordinate with the WGFD (as specified in FLPMA) by reviewing and responding to the WGFD recommendations. A letter was sent to the Wyoming Governor dated April 1, 2009 responding to their concerns about parcels 067 and 073 and honoring their request for deferral. Therefore, BLM did not offer for sale on April 7, 2009, the following 2 parcels per WGFD and the Governor of Wyoming's request: WY-0904-067 (McCullough Peaks CWP) and 073 (grizzly bear), until the Big Horn Basin RMP DEIS has been released.

In Wyoming Outdoor Council, et al., 171 IBLA 108, 121, (February 20, 2007), IBLA states: "In establishing that the BLM's failure to impose the WGFD's policies, plans, and guidelines, on leases covering the crucial winter range parcels amounts to a violation of section 302(b) of FLPMA, appellants would have to show, at a minimum, that issuance of the leases without incorporating WGFD's policies, plans, and guidelines would result in adverse impacts to resource values of the parcels." BCA, TRCP, Audubon, and WOC have not demonstrated that offering these parcels for sale would result in adverse impacts to big game species and their habitat, and thus cause unnecessary and undue degradation to the parcels. Therefore, consistent with the subject IBLA decision, offering the subject parcels does not result in a violation of FLPMA.

The BLM Wyoming has also coordinated with the WGFD during the preparation and revision of all BLM Wyoming RMPs. During the preparation and revision process, if leasing were determined not appropriate for any lands, the lands would be closed to leasing. If the land is open to leasing, mitigation will be developed and appropriate stipulations would be attached to the lease. We believe the stipulations that are attached to the subject protested parcels are adequate to protect big game crucial winter ranges, big game migration routes, and parturition areas. Stipulations are attached to a lease for valid reasons supported by the applicable RMP. Any temporary change (exception) or permanent change (modification or waiver) to a lease stipulation must also be consistent with the RMP and supported by NEPA analysis. This analysis is documented, and may include mitigation, monitoring, and other compliance measures. Any exception, modification, or waiver to wildlife-related stipulations is coordinated with the WGFD. Prior to making any wildlife lease stipulation exception decision, the BLM will take into account all relevant factors, including, but not limited to, the current condition of the animals in the area; are there any current or potential animal stress related problems; what are the current snow conditions; what are the short-term and long-term weather forecasts; what is the current and future wildlife forage availability situation; how many animals are using the area; etc.

Exceptions are granted only when relevant factors described above merit such a decision. Many times the lessee informally meets with the BLM to discuss possible exceptions. As a result, a

lessee may withdraw from any further consideration an exception request because the exception criteria cannot be met. However, if the exception criteria can be met, the lessee will formally request an exception. The formal exceptions are tracked whereas the informal requests are not. This is why it appears BLM grants a high percentage of formal exception requests. To date, the BLM Wyoming has never granted a wildlife lease stipulation modification or waiver.

The regulations at 43 CFR 3162.5-1(a) state in part: “The operator shall conduct operations in a manner which protects the mineral resources, other natural resources, and environmental quality. In that respect, the operator shall comply with the pertinent orders of the authorized officer and other standards and procedures as set forth in the applicable laws, regulations, lease terms and conditions, and the approved drilling plan... Before approving any APD, the authorized officer shall prepare an environmental record of review or an environmental assessment, as appropriate.” The BLM Wyoming attaches timing and surface use COAs to APDs, developed in coordination with the WGFD to protect big game habitat, including parturition habitat.

43 CFR 3162.5-1(b) states in part: “The operator shall exercise due care and diligence to assure that leasehold operations do not result in undue damage to surface or subsurface resources or surface improvements.” The current lease terms specify that the lessee shall conduct operations in a manner that minimizes adverse impacts to the land, air, water, to cultural, biological, visual, and other resources. The lessee shall take reasonable measures deemed necessary by the lessor to accomplish the intent of this section (Section 6 of the lease terms). The Wyoming BLM ensures that oil and gas lessees and operators comply with the above-described regulations and lease terms.

FLPMA gives the BLM authority and responsibility to manage the public lands and resources under the concept of multiple use and sustained yield. Prior to any surface-disturbing activity, The BLM will conduct an environmental review and/or assessment to analyze the anticipated impacts of the proposed activity. The BLM, through this environmental analysis, will impose restrictions and mitigation measures necessary to avoid unnecessary or undue impacts. Therefore, the BLM has determined this protest issue lacks merit.

**5. BCA argues offering parcels for sale located in areas with active RMP revisions does not comply with WO IM 2004-110, Change 1. The protested parcels are located in the RFO area. Parcels of concern to BCA are WY-0904-036, 038, and 043. BCA argues that in accordance with the subject IM, specific consideration for lease sale deferral is to be given to certain categories of land that are “. . . designated in the preferred alternative of draft or final RMP revisions or amendments as lands closed to leasing, lands open to leasing under no surface occupancy, lands open to leasing under seasonal or other constraints with an emphasis on wildlife concerns, or other potentially restricted lands.”**

BLM Response: All the subject parcels protested by BCA in the April, 2009, oil and gas parcel list are available and eligible for oil and gas leasing in accordance with the existing RFO RMP.

RFO ROD was signed in December, 2008. Other FOs currently revising their RMPs include WFO, CyFO, LFO, and BFO. Socioeconomics are an integral part of the NEPA analysis for each RMP revision.

Similar protest arguments were rejected in the IBLA Order dated July 31, 2002, Wyoming Outdoor Council, et al. (IBLA 2002-303). The Order cites Sierra Club Legal Defense Fund, Inc., 124 IBLA 130, 140 (1992), wherein the Board rejected the argument that BLM must suspend an action that is in conformance with an existing land use plan when it decides to prepare a new plan. IBLA recognized that acceptance of protestor's position would seriously impair the BLM's ability to perform its land management responsibilities.

The IBLA also pointed out in their order dated July 31, 2002, that neither the BLM Handbook (H-1601-1), Land Use Planning, nor WO IM No. 2001-191, Processing of Applications for Permit to Drill, Site-Specific Permits, Sundry Notices, and Related Authorizations on Existing Leases, and Issuing New Leases During Resource Management Plan Development, absolutely preclude issuance of oil and gas leases while the underlying RMP is being amended. Rather, the BLM Handbook states existing decisions remain in effect during the amendment process and directs the BLM to review all proposed implementation actions through the NEPA process to determine whether the approval of a proposed action would harm resource values and limit the choice of reasonable alternatives in the land use plans being re-examined.

WO IM No. 2004-110 replaced all discussion pertaining to oil and gas leasing contained in WO IM No. 2001-191. WO IM No. 2004-110, Change 1, provides additional clarification of guidance found in WO IM No. 2004-110. WO IM No. 2004-110, Change 1, provides that lands, which are open for leasing under an existing RMP, may be leased during a revision or amendment process when BLM management determines there are no significant new circumstances or information bearing on the environmental consequences of leasing not within the broad scope analyzed in an existing RMP EIS.

The Council of Environmental Quality regulations do not require postponing or denying a proposed action covered by the EIS for the existing land use plan in order to preserve alternatives during the preparation of a new land use plan and EIS (40 CFR 1506.1(c) (2)), as long as the action does not prejudice the ultimate decision on the program or limit alternatives.

Prior to offering for sale any of the parcels, the RFO Manager completed a DNA to determine whether offering the parcels was consistent with their existing RMP, whether there was new information not previously analyzed that might question whether leasing was still appropriate, or whether offering the parcels for sale would limit the choice of reasonable alternatives in the RMPs being revised. Subsequently, the Field Offices prepared environmental assessments (Previously Sold Lease Parcels EA) to analyze whether the decision to issue leases for these parcels remained appropriate.

The following 4 parcels will be deferred until the BFO, or CYFO, or WFO RMP DEISs have been made available for public review and comment: WY-0904-026 was deferred in order to

allow the BFO to conduct a wilderness characteristics evaluation during their RMP revision. WY-0904-031 was deferred because it did not pass the sage-grouse habitat screen. WY-0904-044 was deferred in order to allow the WFO to conduct a wilderness characteristics evaluation during their RMP revision. WY-0904-074 was deferred in order to allow the CyFO to conduct a VRM evaluation during their RMP revision).

Since BLM has already offered for sale parcels WY-0904-026, 031, 044, and 074, we will defer issuing a lease under the following conditions. BLM will ask the high bidder whether they are willing to wait until the BFO, CYFO, or WFO DEISs have been made available for public review and comment:

- If the high bidder is not willing to wait, the BLM will not issue the lease and will refund their money.
- If the high bidder is willing to wait, but the BLM subsequently determines that leasing the particular parcel is no longer appropriate, the BLM will reject the lease offer and refund their money.
- If the high bidder is willing to wait, and the BLM decides that leasing is still appropriate, but determines that additional stipulations are necessary, the BLM will ask the high bidder if it is willing to accept the lease with the new stipulations. If the high bidder is willing to accept the lease with the new stipulations, the BLM will issue the lease. If the high bidder is not willing to accept the lease with the new stipulations, the BLM will reject the lease offer and refund their money.
- If the high bidder requests a refund of the bonus bid and rental at any time during this process, the BLM will reject the lease offer and refund their money.

Once the BFO, or CYFO, or WFO DEISs have been made available for public review and comment, the BLM may decide that it is still appropriate to offer leases in the subject areas without any new stipulations.

**6. BCA, Audubon, PRBRC, and TRCP argue the BLM should apply a No Surface Occupancy (NSO) stipulation to areas in all parcels within three miles of a Greater sage-grouse lek. The following 71 parcels were protested because the parcels are located in potential Greater sage-grouse lek/breeding, nesting and winter habitat: WY-0904-002, 004, 005, 006, 012, 013, 014, 015, 017, 018, 019, 020, 022, 026, 027, 028, 031, 036, 037, 039, 040, 044, 046, 047, 048, 064, 066, 067, 070, 072, 075, 076, 077, 078, 079, 080, 081, 082, 083, 084, 085, 086, 087, 088, 089, 090, 091, 092, 093, 094, 095, 096, 097, 098, 099, 100, and 101. BCA is asking that these parcels be withdrawn because they contain important habitats and some parcels are in the 75% population core areas. If the BLM does not withdraw the parcels, BCA argues that a three-mile NSO should be placed on all parcels containing leks and that all lease parcels with sage grouse leks, nesting, breeding, brood-rearing and winter habitats contain stipulations which fully comply with and adhere to the Sage-Grouse Habitat Management Guidelines for Wyoming adopted July 24, 2007.**

**In addition to the above groups, Audubon argues the BLM has not taken a hard look at the environmental impacts of leasing and has substantial and new information about the current condition of habitat and wildlife populations including big game as well as Greater sage-grouse. The BLM has not considered the new information, new or revised mitigation measures and stipulations in the environmental analyses for the current RMPs and is currently using ineffective stipulations (concluded by WAFWA, FWS, and the State of Wyoming). BLM has not analyzed in any applicable NEPA document the policy recommendations from the Greater sage- grouse Implementation Team to the Governor. Audubon also argues BLM has violated NEPA by failing to disclose and reconcile inconsistencies between the State and Federal sage-grouse conservation measures. BLM has violated FLPMA because the proposed action is inconsistent with its sensitive species policy. The protesting groups argue that the BLM must take into account new information from the State of Wyoming (the Governor, WGFD, and the Greater sage-grouse Implementation Team) as well as cumulative impacts from ROWs, wind power projects, uranium mining, and new coal fired power plants. Audubon and others argue the existing RMPs do not contain any analysis of the substantial post-2000 research and thinking regarding effects of energy development on Greater sage grouse. Therefore, BLM has not taken a “hard look” at new information or circumstances concerning the environmental effects of a federal action.**

BLM Response: The BLM is a member of the Governor’s Sage-grouse implementation team. The BLM Wyoming is well aware of the need to protect Greater sage grouse and Greater sage-grouse habitat. The BLM attaches stipulations to leases and COAs to APDs, where appropriate, in order to restrict surface-use and surface-disturbing activities during certain times of the year, during certain times of the day, and within certain distances from active Greater sage-grouse leks, and nesting habitat, and crucial winter habitat.

All Wyoming BLM field offices have addressed Greater sage grouse and Greater sage-grouse habitat concerns in their respective RMPs. All BLM field offices have identified timing restrictions to protect the Greater sage-grouse mating season, Greater sage grouse nesting and early brooding season, as well as the Greater sage-grouse crucial winter season. The BLM also requires that oil and gas development avoid leks, nesting/early brooding habitat, and winter habitat. The Wyoming Instruction Memorandum (WY IM) No. 2010-012 will require implementation of the new protection measures as needed, based on site-specific analysis, at the developmental stage as COAs on any leases with the ¼ mile and 2 mile protections currently used. Based on the WY IM No. 2010-013, the BLM will make the decision to offer a parcel for sale through the sage grouse screening process, which determines whether a parcel is appropriate for sale. Part of the screening process is the use of the core maps (Version 3) developed by the Governor’s Sage-grouse implementation team and posted on the WGFD website: [http://gf.state.wy.us/wildlife/wildlife\\_management/sagegrouse/index.asp](http://gf.state.wy.us/wildlife/wildlife_management/sagegrouse/index.asp).

The BLM regulations at 43 CFR 3101.1-2 specify that the lessee shall have the right to use so much of the leased lands as is necessary to explore for, drill for, mine, extract, remove, and dispose of all the leased resources in the leasehold. The regulations, however, go on to subject

this right to three reservations: (1) stipulations attached to the lease; (2) restrictions deriving from specific, non-discretionary statutes (such as ESA); and (3) reasonable measures (conditions of approval) to minimize adverse impacts to other resource values not addressed in the lease stipulations at the time operations are proposed. At a minimum, measures shall be deemed consistent with lease rights granted, provided they do not require relocation of proposed operations by more than 200 meters, or require that operations be sited off the leasehold.

The current lease terms specify that the lessee shall conduct operations in a manner that minimizes adverse impacts to the land, air, water, to cultural, biological, visual, and other resources. The lessee shall take reasonable measures deemed necessary by the lessor to accomplish the intent of these terms (Section 6). Assistant Director of Minerals, Realty and Resource Protection issued an Information Bulletin (IB) No. 2007-119 entitled “Existing Surface Management Authority for Oil and Gas Leases.” This IB describes the legal authority for regulating environmental aspects of oil and gas operations under MLA and FLPMA. The BLM regulations at 43 CFR 3162.1(a) also state “The operating rights owner or operator, as appropriate, shall comply with applicable laws and regulations; with lease terms, Onshore Oil and Gas Orders, Notices to Lessee’s (NTL’s); and with other orders and instructions of the authorized officer. These include, but are not limited to conducting all operations in a manner . . . which protects other natural resources and environmental quality . . .” See also 43 CFR 3162.5-1(a).

The lessee clearly has a legal right to apply for permission to conduct oil and gas operations; however, as specified above, the BLM retains substantial authority over the lessee’s siting of particular surface disturbances. The lessee does not have a right to engage in any surface-disturbing activities until the BLM analyzes the environmental impacts and processes an APD or Sundry Notice. With or without a NSO lease stipulation, at the APD stage, if a Greater sage-grouse lek or crucial Greater sage-grouse habitat is found within the lease, the BLM can and does use its authority to impose reasonable measures, COAs (site-specific mitigation) to minimize adverse impacts to the Greater sage-grouse as described above.

Issuing an oil and gas lease does not cause immediate surface-disturbance. Issuing an oil and gas lease does not jeopardize the continued existence of any listed or special status species or result in the destruction or adverse modification of critical habitat of such species. The lease may never result in drilling or surface-disturbing activities, especially when ESA is concerned. There is great uncertainty as to whether, when, and where a well would be drilled on a lease.

Existing BLM policy protects the Greater sage-grouse and its habitat during all critical times of the year. The BLM has issued an updated sage-grouse policy (WY IM No. 2010-012) and is part of a modeling and mapping effort of sage-grouse habitat on a statewide basis. This extensive statewide mapping and modeling effort includes seasonal habitat types and areas identified by seasonal use. The mapping and modeling effort will allow the BLM and WGFD to identify and refine important Greater sage-grouse seasonal habitat information.

As described in the Previously Sold Lease Parcels EA, the BLM Wyoming has established a sage-grouse screen (WY IM No. 2010-013) that has been performed on all of the previously offered parcels. Screening criteria include: is the parcel outside of or in a sage-grouse core area; is the parcel located adjacent to an existing producing Federal lease; is the parcel located adjacent to a large block of un-leased Federal surface; does the parcel contain a sage-grouse stipulation as required in the applicable RMP; and is the parcel located within one-mile of a producing well located either on a State, fee, or Federal lease. The BLM further considered sage-grouse habitat suitability, population density, geography, and topography.

For those previously offered parcels that pass the screening criteria, and all else is regular, the BLM will issue the lease. For those previously offered parcels that did not pass the screening criteria, the BLM will defer issuing a lease until the sage grouse RMP amendment is complete or when the BFO, CYFO, LFO, or WFO RMP DEIS has been released to the public for review and comment. Once the applicable RMP amendment is complete or applicable RMP DEIS has been released to the public for review, the BLM will decide whether it is appropriate to issue the lease. If leasing is still appropriate, the BLM may decide to impose stricter sage-grouse stipulations on the lease parcels.

Utilizing the Governor's Sage-grouse implementation team Version 3 core area maps, based on sage-grouse habitat screening criteria described in the previously sold lease parcel EA, the following April 2009 parcels will be deferred until the Sage-grouse RMP amendment is completed : WY-0904-079, 080, 081, and 082.

Since the BLM has already offered for sale the parcels listed above, WY-0904-079, 080, 081, and 082, we will defer issuing a lease under the following conditions. The BLM will ask the high bidder whether they are willing to wait until the RSFO RMP amendment is complete:

- If the high bidder is not willing to wait, the BLM will not issue the lease and will refund their money.
- If the high bidder is willing to wait, but BLM subsequently determines that leasing the particular parcel is no longer appropriate, BLM will reject the lease offer and refund their money.
- If the high bidder is willing to wait, and the BLM decides that leasing is still appropriate, but determines that additional stipulations are necessary, the BLM will ask the high bidder if it is willing to accept the lease with the new stipulations. If the high bidder is willing to accept the lease with the new stipulations, the BLM will issue the lease. If the high bidder is not willing to accept the lease with the new stipulations, the BLM will reject the lease offer and refund their money.
- If the high bidder requests a refund of the bonus bid and rental at any time during this process, the BLM will reject the lease offer and refund their money.

Once the applicable sage-grouse RMP amendment has been completed or applicable RMP DEIS has been released to the public for review and comment, the BLM may decide that it is still appropriate to offer leases in the subject area without any new stipulations.

**7. Audubon and TRCP argue the BLM has not considered the mandates of Executive Order 13443 in deciding to offer parcels at the April 2009 oil and gas competitive lease sale.**

BLM Response: Executive Order (EO) 13443, Facilitation of Hunting Heritage and Wildlife Conservation was signed by President Bush on August 16, 2007. The EO directs Federal agencies to manage wildlife habitats on public lands in a manner that expands and enhances hunting opportunities.

The WO issued IM No. 2008-006, Implementation of Executive Order 13443, Facilitation of Hunting Heritage and Wildlife Conservation, on October 10, 2007. The purpose of the IM was to, among other things, evaluate trends in hunting participation; to implement actions that expand and enhance hunting opportunities for the public; establish short and long term goals to conserve wildlife and manage wildlife habitats to ensure healthy and productive populations of game animals in a manner that respects state management authority over wildlife resources and private property rights; seek the advice of state fish and wildlife agencies; and, as appropriate, consult with the Sporting Conservation Council in respect to Federal activities to recognize and promote the economic and recreational values of hunting and wildlife conservation.

The BLM Wyoming issued IM No. WY-2008-007, on October 26, 2007, Implementation of Executive Order 13443, Facilitation of Hunting Heritage and Wildlife Conservation as a supplement to the WO IM.

The BLM Wyoming is working cooperatively with the WGFD to implement EO 13443. The BLM Wyoming manages the habitat on public lands and the WGFD manages the wildlife. As indicated above (refer to our No. 4 response), the BLM and the WGFD entered into a MOU to guide this cooperative process. Appendix 5G of the BLM/WGFD MOU is entitled Oil and Gas Coordination Procedures. This appendix establishes the procedures and responsibilities that both the BLM and WGFD are expected to follow. These procedures and responsibilities include all aspects of the BLM's oil and gas program including the planning process, the leasing process, and the drilling and development process.

Neither the WO nor the Wyoming IMs require the BLM to suspend leasing during the implementation process. The BLM Wyoming will continue to manage the public lands based on multiple use and sustained yield and in compliance with the EO. The EO did not withdraw lands from the operation of the MLA nor does the EO provide for a private right of action to enforce it. TRCP has not shown the decision to offer the parcels for lease will affect hunting opportunities on any parcel.

**8. Audubon and WOC argue the DNAs contain incorrect assertions concerning new information specifically in relation to sage-grouse and do not contain any consideration of wilderness values.**

BLM Response: The BLM's policy, WO IM No. 2001-062, Documentation of Land Use Plan Conformance and National Environmental Policy Act (NEPA) Adequacy, is to perform a DNA to verify whether leasing certain lands has been previously analyzed in an existing NEPA

document. The BLM performs a DNA (“the hard look”) to determine if BLM can rely on existing NEPA documents for the proposed action of leasing parcels for oil and gas. The RMP is the document that authorizes the land allocation (lands open or closed to leasing). The RMP/EIS analyses the impacts of oil and gas development (leasing) on all the other resources (Chapter 4, Environmental Consequences). The BLM also prepares environmental documents (tiered to the RMP) that are site-specific to oil and gas field development. The IM is clear that BLM can rely on a DNA to determine whether leasing certain lands is still appropriate and in accordance with the RMP. The BLM analyzed the potential impacts of oil and gas development (leasing) to all other resources prior to offering the parcels for sale. In addition to preparing DNAs prior to the April 7, 2009, competitive oil and gas sale, the Field Offices prepared environmental assessments (Previously Sold Lease Parcels EAs) to analyze whether the decision to issue leases for these parcels remained appropriate.

**9. BCA argues several parcels are located in areas that conflict with nesting raptors. They argue BLM should apply stronger, science-based lease stipulations. Timing limitation stipulations are inadequate because they allow vehicle traffic and human activity close to nest sites during nesting season after the drilling/construction phase of development is completed. BCA states NSO buffers of at least one mile for raptor nests should be applied. BCA protests the following 48 parcels: WY-0904-002, 003, 004, 005, 006, 011, 012, 013, 014, 015, 016, 017, 018, 019, 020, 021, 025, 028, 032, 037, 040, 041, 042, 046, 047, 048, 050, 051, 052, 053, 054, 055, 056, 057, 058, 059, 063, 065, 066, 067, 068, 069, 073, 074, 075, 076, 077, and 080.**

BLM Response: The BLM Wyoming protects Raptors and raptor habitat pursuant to the Migratory Bird Treaty Act (MBTA) and Bald and Golden Eagle Protection Act (BGEPA). The BLM attaches stipulations to leases and COAs to APDs, where appropriate, in order to restrict surface-use and surface-disturbing activities during certain times of the year and within certain distances from active raptor nests, nesting habitat, and roosting areas. Generally each RMP states the distances and time periods for the type of raptor where surface disturbing and disruptive activities are prohibited. BLM has designated special management areas for the protection of important raptor habitat such as the Shamrock Hills Raptor Concentration Areas or the Jackson Canyon ACEC.

BLM includes in every RMP an appendix, usually Appendix 1, entitled “Wyoming Bureau of Land Management Mitigation Guidelines for Surface Disturbing and Disruptive Activities.” These guidelines give the BLM the right to modify operations of all surface and other human presence disturbance activities as part of the statutory requirements for environmental protection. Raptor surveys may be required of the operator before any operations may take place. Other BMPs that may be required are installation of raptor anti-perch devices, artificial nesting sites, or raptor studies/monitoring that may be documented in a project specific Avian Protection Plan (APP).

**10. BCA argues leasing the 9 protested parcels would violate the National Historic Preservation Act (NHPA). BCA argues an agency must comply with the NHPA’s**

**provisions before selling oil and gas leases. BCA also argues a NSO should be applied to the trails' parcels or the parcels should be withdrawn from the sale until adequate pre-leasing NEPA analysis is conducted and protections and mitigation are incorporated into the leases. BCA protested the following 9 parcels: WY-0904-003, 008, 024, 039, 056, 075, 079, 092, and 101.**

BLM Response: NHPA is a procedural statute designed to ensure an agency identifies and considers significant cultural resources in its decision-making process. BLM is to identify and protect historic and cultural properties from surface activities undertaken by a BLM authorization (Federal undertaking).

The BLM, the Advisory Council on Historic Preservation, and the National Conference of State Historic Preservation Officers, entered into a national programmatic agreement to describe and document the BLM's responsibilities and procedures under NHPA. The Wyoming State Historic Preservation Officer and Wyoming BLM also entered into a State Protocol programmatic agreement after the 1997 national programmatic agreement was in place. The State programmatic agreement established the manner in which BLM will comply with the NHPA requirements. The State Protocol is found on the internet at [http://www.blm.gov/wy/st/en/programs/Cultural\\_Resources/protocol.html](http://www.blm.gov/wy/st/en/programs/Cultural_Resources/protocol.html). Because of these agreements among all the appropriate agencies and subject matter experts, BLM Wyoming complies with the NHPA with respect to oil and gas leasing issues.

Stipulations are derived from the protections afforded by the NEPA analysis of the impacts in the FEIS of the RMP. There are stipulations applied to parcels where there are trails' concerns. In most cases, this involves a CSU that restricts or prohibits activity until the operator and BLM come to an agreement concerning mitigation of any impacts. A CSU is also used to protect Class I and/or Class II visual resources. Petroglyphs and other Indian rock art are also protected by stipulations derived from the NEPA analysis in the FEIS of the RMP and the JMH NEPA analysis in the activity plan-JMHCAP.

**11. BCA asks the BLM to prepare an environmental analysis (EIS) pursuant to NEPA in order to address BCA's issues and concerns on global warming and climate change including the supporting evidence provided by BCA's protest. BCA argues that this NEPA process will need to be consolidated with the BLM Wyoming's current RMP revision efforts and at a statewide or regional scale. BCA argues that Secretarial Order 3226, FLPMA, NEPA, and the BLM's Public Trust Duty requires the BLM to consider and analyze potential climate change impacts before lease rights are sold.**

BLM Response: The protest specifically states at the outset that it is "predicated on the BLM's failure to address global warming and climate change and the impacts of this failure upon BCA's interest." The protest consists of comments concerning the BLM's role in addressing global warming, climate change, and greenhouse gas emissions (GHG) from Federal onshore oil and gas activities before lease rights are sold.

BCA asserts that the BLM has a general obligation to consider and analyze potential climate change impacts under the NEPA, 42 U.S.C. 4321, et seq., the FLPMA, 43 U.S.C. 1701 et seq., Secretarial Order (SO) 3226 (signed January 19, 2001), and BLM's "Public Trust Duty." Notably, BCA does not allege that BLM violated any provision of NEPA, FLPMA or their implementing regulations in offering the leases for sale.

The core of BCA's protest appears to be a recommendation that BLM, before issuing leases for the 102 parcels offered in the April, 2009 sale, prepare an EIS pursuant to NEPA to address global warming and climate change issues allegedly implicated by the lease sale. Specifically, BCA asks the BLM, through the NEPA process, to take the following actions:

- (1) Quantify past, present, and reasonably foreseeable greenhouse gas emissions from the BLM-authorized oil and gas development to address the direct, indirect, and cumulative impacts of these greenhouse gas emissions to the environment;
- (2) Identify, consider, and adopt a greenhouse gas emissions limit or greenhouse reduction objective for the BLM-authorized oil and gas activities;
- (3) Identify, consider, and adopt management measures – such as pre-commitment lease stipulations and post-commitment conditions of approval – to reduce greenhouse gas emissions from the BLM-authorized oil and gas activities;
- (4) Track and monitor greenhouse gas emissions from the BLM-authorized oil and gas operations through time; and
- (5) Consider how global warming and climate change impacts the environment, and whether such impacts warrant additional environmental protections.

BCA explains that their intent is to ensure that oil and gas development on public lands is held to the highest science-based standards. Their "fundamental purpose in recommending that the BLM prepare an EIS is to engage the BLM in a dialogue to address these issues with the participation of the broader public and oil and gas industry."

The BLM's inventory and land use planning process under FLPMA is ongoing. The BLM Wyoming is currently revising its plans in Buffalo, Worland, Cody, and Lander, and recently revised the Casper, Kemmerer, Pinedale, and Rawlins plans. The BLM Wyoming has also completed the "Previously Sold Lease Parcels EAs" that addresses climate change. While BLM revises RMPs, it will continue to manage public lands according to existing land use plans, see Colorado Environmental Coalition, 161 IBLA 386 (2004). The BLM recently completed environmental analyses as described in the Previously Sold Lease Parcels EAs. These EAs provide additional disclosure and analysis of the environmental impacts associated with the BLM's decision to issue leases for the April 2009, parcels.

We appreciate BCA's recommendations relating to global warming and climate change and the wealth of scientific information they have provided in the protest and attached exhibits. BCA has not alleged, however, and has not demonstrated by competent evidence that the BLM's decision to offer the 102 parcels in the lease sale violated any law. Nor does the protest allege any deficiencies or irregularities in the notice of lease sale or supporting documentation. The protest fails to identify any specific effect on global warming or climate change that will result from leasing the protested parcels. Further, the protest fails to identify any change in the affected environment in which the action will occur that would alter our analysis of the other effects of the leasing action.

**A. SO 3226 Does Not Require BLM to Evaluate Potential Climate Change Impacts of Leasing the Parcels in the April 2009 Sale.**

BCA assert that "[t]he starting point underscoring the BLM's legal obligation to address global warming and climate change" is a short order, issued by former Secretary of the Interior Babbitt on January 19, 2001. SO 3226, entitled "Evaluating Climate Change Impacts in Management Planning," provides in pertinent part:

Each bureau and office of the Department will consider and analyze potential climate change impacts when undertaking long-range planning exercises, when setting priorities for scientific research and investigations, when developing multi-year management plans, and/or when making major decisions regarding the potential utilization of resources under the Department's purview.

SO 3226 directs bureaus and offices within the Department of the Interior to address potential climate change impacts of multi-year management plans and major decisions regarding resource utilization.

Because the April 2009 oil and gas lease sale involving 102 parcels is not a programmatic or long-range land allocation or management decision, SO 3226 does not apply. Second, some of the BLM RMPs containing the decisions to open the lands to leasing involved in the April 2009 sale predate the 2001 order. Most of the relevant plans were issued between 1985 and 2000. Therefore, the order does not apply to them.

Finally, nothing in the 2001 order requires the cessation of actions authorized under existing plans. As the BLM is developing new RMPs and plan amendments for public lands in Wyoming, it is addressing greenhouse gas emissions and climate change. The BLM Wyoming has prepared EAs addressing climate change for the previously sold but not issued parcels including those parcels sold in the April 2009 sale and relied upon these EAs to make the decision on lease issuance.

**B. FLPMA Does Not Require that BLM Analyze Potential Climate Change Impacts Before Leasing the Protested Parcels.**

BCA states that FLPMA provides the BLM with the authority and responsibility to address global warming and climate change through resource inventories, land use planning, and land use protection and management. BCA recites the broad Congressional policies behind FLPMA and its general mandate that the BLM manage its lands for multiple-use and sustained yield. Notably, the protest does not allege that the BLM failed to comply with any provision of FLPMA or the applicable land use plans developed pursuant to FLPMA by offering the protested parcels for sale.

We agree that FLPMA vests the BLM with broad authority and responsibility to gather information about the public lands, their resources and values; to develop land use plans; and to manage the public lands in accordance with these plans. Sections 201 and 202 of FLPMA, 43 U.S.C. 1711 and 1712, provide for a comprehensive, ongoing inventory of Federal lands and for a land use planning process that projects present and future uses, based on the inventoried characteristics.

Not surprisingly, FLPMA, which was enacted more than 30 years ago, does not address how the BLM is to manage the public lands under the principles of multiple use and sustained yield in light of the alleged phenomena of greenhouse gas emissions, global warming and climate change. FLPMA gives the BLM ample authority, however, to address emerging issues in its ongoing inventory and land use planning efforts. At the same time, the BLM has broad discretion in deciding how to exercise this authority. See Norton v. Southern Utah Wilderness Alliance, 542 U.S. 55, 58 (2004) (FLPMA establishes a dual regime of inventory and planning to enable BLM to carry out its “enormously complicated task” of multiple-use management of the public lands).

The protest does not identify any deficiencies, traced to a lack of compliance with FLPMA, in any of the land use plans that opened to leasing the 102 parcels offered in the April 2009 sale. FLPMA does not dictate when a relevant plan is too old to authorize a leasing decision or compel the BLM to engage in new land use planning. Just as FLPMA does not establish a clear duty of when to revise land use plans, it does not create a duty to cease actions during such revisions. ( ONRC Action v. BLM, 150 F.3d 1132, 1139 (9<sup>th</sup> Cir. 1998)). Plaintiff ONRC Action contended that BLM had failed to act in accordance with duties established under FLPMA to adequately monitor and update its management plans before relying on them to make land management decisions. Specifically, the plaintiffs relied on 43 U.S.C. §§ 1701, 1712, and 1732, the same provisions of FLPMA on which BCA relies in this protest. The Ninth Circuit agreed with the BLM’s interpretation of FLPMA that nothing in these provisions provided a clear statutory duty with which the BLM must comply. The court explained:

*Section 1701* provides several policy statements which require due consideration, but do not provide a clear duty to update land management plans or cease actions during the updating process. *Section 1712* requires the revision of LUPs when “appropriate.” *Section 1712* also provides the proper procedure and criteria to follow during development or revision of a land use plan.

The language in *Section 1712* does not, however, establish a clear duty of when to revise the plans, nor does it create a duty to cease actions during such revisions. *Section 1732* also lacks a statement of clear statutory duty.

Id.

A 2007 report by the Government Accountability Office (GAO) is consistent with our position that FLPMA does not compel the BLM to defer leasing the protested parcels until the BLM addresses global warming and climate change. “Climate Change: Agencies Should Develop Guidance for Addressing the Effects on Federal Land and Water Resources,” The GAO recognized that the statutes governing the BLM’s and other federal agencies’ resource management activities “generally do not require the agencies to manage for specific outcomes, such as to provide a specific response to changes in ecological conditions.” Instead, the GAO observed:

[T]hese laws give the agencies discretion to decide how best to carry out their responsibilities in light of their respective statutory missions as well as the need to comply with or implement specific substantive and procedural laws, such as the Endangered Species Act of 1973 (ESA), the National Environmental Policy Act (NEPA), or the Clean Air Act. The agencies are generally authorized to plan and manage for changes in resource conditions, regardless of the cause that brings about the change. As a result, federal resource management agencies are generally *authorized, but are not specifically required*, to address changes in resource conditions resulting from climate change in their management activities.

2007 GAO Report at 2 (emphasis added).

### **C. BLM Does Not Have A “Public Trust Duty” to Consider and Analyze Climate Change Impacts.**

BCA contends that the BLM has a so-called “Public Trust Duty” that “obligates the BLM to exercise its duty of reasonable care by quantifying GHG emissions from oil and gas operations on public lands, to affirmatively reduce those GHG emissions to protect the atmosphere and the public lands, and to affirmatively take action to ensure that the built and natural environments on the BLM public lands are sufficiently resilient to withstand, as best as they are able, global warming and climate change impacts.” In support of this alleged duty, BCA relies on two decisions of the U.S. Supreme Court rendered more than a century ago: Illinois Central R.R. Co. v. Illinois, 146 U.S. 387, 455 (1892); and Geer v. Connecticut, 161 U.S. 519, 525-29 (1896).

Whether any type of public trust duty applies to management of Federal lands is unclear. In Sierra Club v. Andrus, 487 F. Supp. 443 (D.D.C. 1980), the district court concluded that a 1978 amendment to the National Park Service Organic Act reflected Congress’ intention to eliminate claimed public trust duties arising outside of statutes and that FLPMA is the exclusive embodiment of the BLM’s management responsibilities. Confronted with similar public trust

arguments, most courts have ruled that an agency's statutory duty is exclusive. Even if a public trust duty exists, its contours would be defined by statutes and regulations, as is the case of the clear trust responsibility resulting from the United States' elaborate control over Indian property. See United States v. Mitchell, 463 U.S. 206, 224 (1983) (Statutes and regulations "define the contours of the United States' fiduciary responsibilities" to Indian allottees.).

Even if the BLM has a public trust duty (beyond its statutory duties) to ensure that public lands and resources are managed appropriately, this general allegation is not a sufficient objection to the April 2009 sale. As stated in the posted oil and gas lease sale notice, parties must be specific in their protests and direct their objections to the proposed action. BCA's claim is vague and unsupported by any evidence. BCA does not attempt to explain how this claim relates to the protested parcels. This argument lacks merit and we reject it.

#### **D. NEPA Does Not Require that the BLM Evaluate Potential Climate Change Impacts in an EIS Before Leasing the Protested Parcels.**

BCA's primary objection to issuance of the leases in the April 2009 sale is the BLM's failure to consider and analyze in an EIS the potential climate change impacts associated with offering the 102 parcels for sale. BCA contends that the BLM must defer leasing until the BLM has analyzed these impacts in an additional or supplemental EIS.

BCA asserts that, "once a NEPA analysis is completed, an agency must prepare a supplement whenever the agency makes substantial changes in the proposed action that are relevant to environmental concerns or there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts." Thus, they argue, "The BLM cannot rely on existing NEPA analyses to justify the lease sales given that these NEPA analyses do not appear to address global warming and climate change in any capacity."

BCA implies that the BLM has failed to comply with its obligations under NEPA through broad allegations and suggestions. They have not supported such claims, however, with respect to the specific parcels offered in the April 2009 lease sale.

##### **1. The Legal Standard**

NEPA requires a Federal agency to prepare an EIS as part of any "proposals for legislation and other major Federal actions significantly affecting the quality of the human environment." 42 U.S.C. § 4332(2)(C). The decision whether to prepare a new EIS is similar to the decision whether to prepare a supplemental EIS and is highly factual. The Council on Environmental Quality regulations, which the Supreme Court has held are entitled to substantial deference, requires Federal agencies to supplement either draft or final EISs if there "are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts." 40 C.F.R. § 1502.9(c)(1)(ii). In Marsh v. Oregon Natural Resources Council, 490 U.S. 360 (1989), the Supreme Court interpreted § 4332 in light of this regulation to

require agencies to “take a hard look at the environmental effects of their planned action” to assess if supplementation might be necessary. Id. at 374.

The Supreme Court has indicated that a pragmatic approach should be used in deciding whether and how to update existing NEPA analyses in light of new information. The Court noted that the “cases make clear that an agency need not supplement an EIS every time new information comes to light after the EIS is finalized. To require otherwise would render agency decision-making intractable, always awaiting updated information outdated by the time a decision is made.” Marsh, 490 U.S. at 374. The Court suggested that an agency’s inquiry should be: Is the new information sufficient to show that the remaining action will affect the quality of the human environment in a significant manner or to a significant extent not already considered? Id. As the Ninth Circuit puts it, an agency must prepare additional NEPA analysis if the proposed action “will have a significant impact on the environment in a manner not previously evaluated and considered.” Westlands Water District v. Interior, 376 F.3d 853, 873 (9<sup>th</sup> Cir. 2004), quoting South Trenton Residents Against 29 v. FHA, 176 F.3d 658, 663 (3d Cir. 1999).

As explained below, and supported by the analyses in the Previously Sold Lease Parcels EAs, we find that BCA’s information is not significant in terms of the leasing decision.

## **2. BLM’s existing NEPA analysis covering the protested parcels is adequate.**

The sale and issuance of oil and gas leases is needed to meet the growing energy needs of the United States public. Wyoming is a major source of natural gas for heating and electrical energy production in the lower 48 states, especially for markets in the eastern United States. Continued sale and issuance of lease parcels is necessary to maintain options for production as oil and gas companies seek new areas for production or develop previously inaccessible or uneconomical reserves.

The BLM prepares a DNAs for each parcel nominated for lease to determine whether offering the parcel conforms to the existing land use plan and whether the environmental analysis completed for the plan is adequate to support the lease decisions. DNAs are forms used by the BLM to examine whether it can rely on existing NEPA documents to issue the lease. DNAs document whether new circumstances, new information, or environmental impacts not previously anticipated or analyzed in the governing LUP and NEPA analyses warrant new analysis in addition to existing NEPA documents.

Each of the relevant the BLM Field Offices in this case examined the existing NEPA analyses covering the parcels offered at the April 2009 sale and determined that the analyses sufficiently assessed the environmental consequences of leasing the parcels. The Field Offices used DNAs to make and document that assessment. In addition, the BLM also prepared EAs to verify conformance with the approved land use plan, address new information related to climate change and other issues, and provide the rationale for issuing parcels sold during the April 2009 lease sale.

Scientists and the BLM resource specialists have only limited ability to estimate potential future impacts of climate change on the environment of a particular area, regionally or locally. Based on the BLM resource inventories conducted, monitoring data collected, resource assessments made on a continuous basis to help understand the condition and health of the resources on public lands, and other additional information, the descriptions of the affected environment made in the relevant RMP/EISs are still accurate and do not substantially change the analysis of the effects of leasing the 102 parcels in question.

As the Previously Sold Lease Parcels EAs point out, while future development of the parcels could emit GHGs, leasing alone will not, because the leasing decision itself does not authorize development or production. Climate change science at this time does not enable us to translate any incremental contributions to global GHG emissions that may result from potential development of these parcels into incremental effects on the global climate system or the environment in the leasing area. *See, e.g. Powder River Basin Resources Council*, 180 IBLA 119, 132-135 (2010). Because the incremental effects of potential future activities on these parcels cannot be analyzed with any degree of reliability, the new information regarding climate change would not substantially change the analysis of the action here. Nevertheless, the BLM has adequately disclosed and analyzed climate change impacts in the Previously Sold Lease Parcels EAs.

**E. Protestors' Recommendations for Addressing Global Warming, Climate Change and Greenhouse Gas Emissions Do Not Require that Oil and Gas Leasing be Deferred.**

The protest recommends that the BLM take specific actions, through the NEPA process, before issuing leases for the protested parcels. BCA recommends that the BLM should identify, consider, and adopt measures to reduce GHG emissions from oil and gas activities that the BLM regulates. BCA states that the BLM should consider making the types of measures that BCA suggests mandatory as lease stipulations. The recommendations do not relate specifically to the parcels offered in the April 2009 lease sale and are not legal requirements.

We have reviewed the recommended actions in the protest and find that all of them concern operational issues that can be addressed, as described in the Previously Sold Lease Parcels EAs, in conditions of approval at the stage of an APD. These conditions can be required at that stage based on either programmatic or site-specific NEPA analysis if they can be demonstrated to be reasonable and appropriate. They need not be adopted as lease stipulations. Mere lease issuance, in other words, does not preclude BLM from imposing the types of requirements on lease operations suggested in the protest at the time when APDs, surface use plans, and rights-of-way, are submitted to the BLM. The BLM regulations pertaining to surface use rights provide that the BLM may regulate surface use through reasonable measures "to minimize adverse impacts to other resource values, land uses or users not addressed in the lease stipulations at the time operations are proposed," consistent with lease rights granted (43 C.F.R. 3101.1-2).

## **Conclusion**

We agree with BCA that NEPA provides a useful mechanism to analyze the phenomena of climate change and GHG emissions associated with oil and gas leasing. The BLM is currently addressing these issues in environmental analyses associated with new resource management plans and plan amendments in Wyoming. BCA has failed to sustain their burden. Although they have submitted extensive exhibits that discuss the developing scientific understanding of climate change in global terms, little of this documentation, if any, is directly relevant to the lease parcels at hand. Instead, BCA is asking that the BLM defer leasing the parcels while BLM undertakes a review of the developing science regarding global climate change and the likely contribution of GHG emissions. Such a review would not contribute to a better decision on the 102 parcels at issue and, therefore, will not be undertaken.

## **Decision:**

The following 10 parcels will be deferred based on the information contained in the text within the Discussion section as well as the information disclosed in the Environmental Assessments (EAs) prepared by each BLM WY Field Office entitled "Previously Sold Lease Parcels EA" and screens for wilderness characteristics and Greater sage-grouse: WY-0904-026, 031, 044, 074, 079, 080, 081, and 082. Parcel 003 is being deferred to add inadvertently missed stipulations for Class I and II waters. Parcel 012 is deferred pending completion of the sage-grouse RMP amendment. Parcels 026, 031, 044, and 074 are deferred pending completion of RMP revisions. Parcels 079, 080, 081, and 082 did not pass the sage-grouse screening criteria are deferred. Parcels WY-0904-067 and 073 were removed from the competitive oil and gas sale before the sale. The remaining 92 parcels will be issued.

## **Appeal Information**

This Decision may be appealed to the Interior Board of Land Appeals, Office of the Secretary, in accordance with the regulations contained in 43 CFR, Part 4 and Form 1842-1 (copy attached). If an appeal is taken, your notice of appeal must be filed in this office within 30 days from your receipt of this Decision. The protestor has the burden of showing that the Decision appealed from is in error.

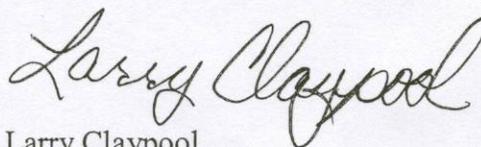

If you wish to file a petition for a stay of the effectiveness of this Decision during the time that your appeal is being reviewed by the Board, the petition for a stay must accompany your notice of appeal. A petition for a stay is required to show sufficient justification based on the standards listed on the attached document. Copies of the notice of appeal and petition for a stay must be submitted to the Interior Board of Land Appeals and the appropriate Office of the Solicitor (see 43 CFR §4.413) at the same time the original documents are filed with this office. Copy of the notice of appeal and petition for a stay must also be submitted to each adversely affected party named in this decision at the same time the original documents are filed with this office. If you request a stay, you have the burden of proof to demonstrate that a stay should be granted.

### Standards for Obtaining a Stay

Except as otherwise provided by law or other pertinent regulations, a petition for a stay of a decision pending appeal shall show sufficient justification based on the following standards:

- (1) The relative harm to parties if the stay is granted or denied,
- (2) The likelihood of the protesters' success on the merits,
- (3) The likelihood of the immediate and irreparable harm if the stay is not granted, and
- (4) Whether the public interest favors granting the stay.

You will find attached to this decision a "Competitive Oil and Gas Lease Sale Results" which contains a list of persons who have purchased the protested parcels at the April 2009 sale and are, therefore, adverse parties who must be served with any pleadings.

Larry Claypool  
Deputy State Director,  
Minerals and Lands
