

Appendix K. Livestock Grazing Allotments and Range Improvements

This appendix provides an overview of livestock grazing allotments including acreage and season of use; allotment categorization; and allotments assessed for standards and guidelines. In addition, it provides details of range improvement projects and the Bureau of Land Management's (BLM) approach to comprehensive grazing management strategies. The data are presented throughout the narrative and in the following six tables:

- Table K.1, "Grazing Allotments, Acres, Season of Use, and Animal Unit Months" (p. 1551)
- Table K.2, "Allotment Categorization – Current and Proposed" (p. 1563)
- Table K.3, "Lander Field Office Grazing Allotments Assessed for Meeting Standards" (p. 1569)
- Table K.4, "Allotment Management Plans and Rangeland Management Agreements Developed" (p. 1573)
- Table K.5, "Summary of Range Improvements Lander Field Office, 1986-2009" (p. 1576)
- Table K.6, "Animal Unit Months Authorized, 1989-2008" (p. 1581)

In 1985, the BLM established three categories for allotments to identify areas where management was needed, as well as to prioritize workloads and the use of range improvement dollars generated from the portion of grazing fees returned to the field office. See Chapter 4, *Fire and Fuels Management* for changes in the use of range improvement dollars. The categories and criteria used to place an allotment into each category are described below. Subsequently, in 2008, the BLM revised the definitions for these categories in Instruction Memorandum (IM) 2009–018, *Process for Setting Priorities for Issuing Grazing Permits and Leases*. The guidance makes clear that categorization is not done as part of a Resource Management Plan (RMP) revision and does not require an RMP amendment or maintenance action. However, part of the National Environmental Policy Act (NEPA) process associated with the RMP and Environmental Impact Statement (EIS) is to engage the public in scoping and providing input on management decisions. Accordingly, this appendix identifies information on grazing allotments to better inform the public on livestock grazing management on the allotment level. Any allotment specific decisions beyond analyzing closing as much as 12,839 acres to public grazing, would be analyzed on a site-specific basis as the procedures required by IM 2009–018 are implemented.

The categorization process now emphasizes ensuring that land health considerations are the primary basis for prioritizing the processing and issuing of grazing authorizations for use of allotments on public lands. A flow chart for the process of issuing grazing permits and leases establishes the process to be followed as outlined in IM 2009–018.

Category I – Allotments where current livestock grazing management or level of use on public land is, or is expected to be, a significant causal factor in the non-achievement of land health standards, or where a change in mandatory terms and conditions in the grazing authorization is or may be necessary. When identifying Category I allotments, review condition of critical habitat, conflicts with greater sage-grouse, and whether projects have been proposed specifically for

implementing the Healthy Lands Initiative. Some of these allotments might be administered by other BLM Field Offices.

Category M – Allotments where land health standards are met or where livestock grazing on public land is not a significant causal factor for not meeting the standards and current livestock management is in conformance with guidelines developed by the State Directors in consultation with Resource Advisory Councils. Allotments where an evaluation of land health standards has not been completed, but existing monitoring data indicates that resource conditions are satisfactory.

Category C – Allotments where public lands produce less than 10 percent of the forage in the allotment or are less than 10 percent of the land area. An allotment should generally not be designated Category C if the public land in the allotment contains: (1) critical habitat for a threatened or endangered species, and/or (2) riparian-wetlands adversely affected by livestock grazing.

Comprehensive grazing management strategies are first and foremost intended to maintain, and/or make substantial progress toward, fulfillment of the Wyoming Standards for Healthy Rangelands. Comprehensive grazing management strategies should include and consider defined resource management objectives for areas preferred by livestock, permitted use, class of livestock, livestock season of use, limits of flexibility, monitoring requirements, forage allocations necessary to support wildlife and wild horses, and the need for range improvements considerate of potential conflicts with other resource values. Existing permits that have already been fully processed under NEPA evaluating a range of grazing alternatives and existing functional Allotment Management Plans already include comprehensive grazing management strategies. The development of such a strategy will vary based on the identified management category for the grazing allotment as follows:

- Category “I” allotments will be prioritized for the development of comprehensive grazing strategies. The Lander Field Office will evaluate grazing strategies on I category allotments based on the following criteria.
 1. Carrying Capacity of the Allotment: Stocking rates will be established based on the current average forage production and availability considerate of forage requirements of wildlife and wild horse populations. Stocking rates must allow for adequate residual cover to dissipate energy, capture sediment, and support proper infiltration and soil moisture storage/release in support of ecological processes.
 2. Season of use: Grazing during the critical growing season and during the hot season will be required to be managed in a manner that allows for sufficient rest (e.g., rest/deferred rotation systems) to promote healthy, vigorous native plant communities and minimize soil loss and compaction.
 3. Class of livestock: If the current class of livestock is considered to be an important factor in non-fulfillment of the Wyoming Standards for Healthy Rangelands, a change in class of livestock will be considered to make substantial progress toward fulfillment of the Wyoming Standards for Healthy Rangelands. In the event a change in class of livestock is not feasible, stocking rates and/or the season of use shall be appropriately modified to make substantial progress toward fulfillment of the Wyoming Standards for Healthy Rangelands in consideration of the overall grazing strategy.
 4. Range Improvement Projects: Range improvement projects will be considered when existing range improvements have been satisfactorily maintained, the project has been found to be necessary for the establishment of modified grazing practices, and/or when the project has been designed to make substantial progress toward fulfillment of the

Wyoming Standards for Healthy Rangelands in conformance with the Lander RMP. All proposed range improvements will be evaluated for conflicts with other resource values and must be designed to mitigate impacts to any conflicting values. Resource values that will be evaluated for potential conflicts with range improvement projects include, but are not limited to, special status species, wild horses, critical wildlife habitats, cultural resources, National Historic Trail and Continental Divide National Scenic Trail corridors, recreation, designated Areas of Critical Environmental Concern, wilderness study areas, and lands with wilderness characteristics. Projects that are designed to promote substantial improvement toward meeting the Wyoming Standards for Healthy Rangelands and sufficiently mitigate impacts to other resource values, if any, will receive a higher priority consideration. Similarly, projects that are designed to promote substantial improvement toward meeting the Wyoming Standards for Healthy Rangelands, and are initiated to enhance other resource values (e.g., wildlife, recreation etc.) will receive a higher priority consideration. Figure K.1, "Range Infrastructure Development" (p. 1582), identifies the process by which the Lander Field Office will prioritize range improvement project proposals.

- Category "M" and "C" allotments will be evaluated for comprehensive grazing management strategies on a case-by-case basis. Where alternative grazing strategies and/or range improvement projects are proposed, the proposals will be evaluated for conflicts with other resources and the potential impacts to the Wyoming Standards for Healthy Rangelands. Projects that are designed to promote enhanced rangeland health and are initiated to enhance other resource values (e.g., wildlife, recreation) will receive a higher priority consideration.
- Monitoring programs will be incorporated into comprehensive grazing management strategies to evaluate the success of new management strategies in meeting resource objectives. The cooperative monitoring program is intended to provide a framework for the facts and data to be collected, analyzed, and shared with the public, and used by the BLM to make land management decisions. A cooperative monitoring effort with the active participation of the grazing permittees and interested public will be encouraged.

The following methods were used to calculate the disturbance areas associated with construction of range improvement projects.

Spring Developments

A. $(a+b+c) \div d = \text{area affected by development} = \mathbf{1.0 \text{ acre}}$

where $a = 40,000$ square feet; 200 feet by 200 feet area fenced around the spring to prevent damage from livestock,

$b = 1,200$ square feet; 60 feet of pipeline with a 20 foot width of disturbance for installation with a backhoe,

$c = 28$ square feet area displaced by a trough 2 feet in width by 14 feet in length, and

$d = 43,560$ square feet, the number of square feet in one acre.

B. $\pi r^2 \div d = \text{acres disturbed by livestock concentration} = \mathbf{1.6 \text{ acres}}$

where $\pi = 3.14$ and,

$r^2 = 50$ yards (150 feet), the radius of the livestock concentration area and

$d = 43,560$ square feet, the number of square feet in one acre.

C. Total affected area for the spring development would be 1.0 acre + 1.6 acres = **2.6 acres.**

Water Well Developments

A. $(a+b+2c+d) \div e =$ area affected by development = **0.2 acre**

where $a = 5,000$ square feet; affected area by well and storage tank,
 $b = 28$ square feet; a water trough 2 feet in width by 14 feet in length,
 $c = 1,000$ square feet; 50 feet of pipeline with a 20 foot width of disturbance
 for installation with a backhoe,
 $d = 2,500$ square feet; 50 feet by 50 feet affected area of an overflow pond, and
 $e = 43,560$ square feet, number of square feet in one acre.

B. $\pi r^2 \div d =$ acres disturbed by livestock concentration = **1.6 acres**

where $\pi = 3.14$, and
 $r^2 = 50$ yards (150 feet), the radius of the livestock concentration area and
 $d = 43,560$ square feet, the number of square feet in 1 acre.

C. Total acres affected by a water well development would be $0.2 \text{ acres} + 1.6 \text{ acres} =$ **1.8 acres**.

Fencing

BLM three-wire cattle fence and riparian-wetlands pasture fence.

$axb \div c =$ total affected area = **1.5 acres/mile**

where $a = 12$ feet, this includes a two-tracked trail, produced by motor vehicles,
 on each side of the fence,
 $b = 5,280$ feet, the number of feet in 1 mile, and
 $c = 43,560$ square feet, the number of square feet per acre.

$12 \text{ feet/mile} \times 5,280 \text{ feet/mile} = 63,360 \text{ square feet/mile} \div 43,560 \text{ square feet/acre}$
 $= 1.45 \text{ acres/mile}$

Pasture Boundary Signs

Assumed to be 5 percent of the total affected area, the BLM three-wire cattle fence requires repeated travel along the previously constructed fence, therefore causing additional disturbances. Construction of a pasture boundary fence would require a single trip, therefore causing a minimal amount of disturbance.

Cattleguards

All proposed cattleguards would be constructed on an existing road; therefore, no additional disturbance would take place.

Artesian Well (Wetland Fencing)

A. $(600 \text{ feet} \times 6 \text{ feet} = 3,600 \text{ square feet}) + (600 \text{ feet} \times 12 \text{ feet} = 7,200 \text{ square feet})$
 $= 10,800 \text{ square feet} \div 43,560 \text{ square feet/acre} =$ **0.2 acres** on fenceline.

B. $200 \text{ feet} \times 200 \text{ feet} = 40,000 \text{ square feet} \div 43,560 \text{ square feet/acre} =$ **0.9 acres**
 inside permanent enclosure.

Pipelines

1 foot x 5,280 feet/mile = 5,280 square feet/mile ÷ 43,560 square feet/acre = **0.1 acre/mile**

Table K.1. Grazing Allotments, Acres, Season of Use, and Animal Unit Months

Allotment Number	Allotment Name	Public Acres	Permit/Lease	Livestock Kind	Season of Use	Public AUMs
180	Lost Creek	238	Permit – Sec 3	Cattle	6/15 – 9/25	21
