

Maintenance Sheet
Plan Change Number: G-6

Plan Name: Approved Rawlins Resource Management Plan	Area: Rawlins Field Office, Wyoming
Page: G-6	Column: N/A
Paragraph: N/A	Line: N/A
Section/Heading: Ephemeral Surface Waters	

CHANGE

(Describe exactly what is to be deleted, added, rewritten, etc.)

Delete: Streams, lakes, or other surface water bodies that have open water only during or immediately after periods of rainfall or snowmelt.

Insert: Ephemeral surface waters have flowing water only during, and for a short duration after, precipitation events and/or snowmelt in a typical year. Ephemeral stream beds are located above the water table year-round. Groundwater is not a source of water for the stream. Runoff from rainfall and snowmelt are the primary sources of water for stream flow.

REASON

(Describe exact rationale for above change to include reference material, i.e. EA, EIS, IM, etc.)

The original definition was incorrect. The definition is being corrected in accordance with the US Army Corps of Engineers definition.
