Fillmore Office Building

The new 9,700 square-foot Fillmore office building incorporates a number of innovative energy efficiency measures. Through careful location and orientation of windows and doors, the use of skylights, automatic lighting controls, additional insulation, and solar heating, the building will be up

to 70% more energy efficient than a minimum code compliant building. Other sustainable measures include low flow toilet fixtures; low volatile organic compound paints, sealants, and adhesives; recycled content; and no permanent irrigation systems.
